Ideation Phase
Define the Problem Statements

Date	31 January 2025
Team ID	LTVIP2026TMIDS80982
Project Name	Prosperity Prognosticator: Machine Learning for Startup Success Prediction
Maximum Marks	2 Marks

Customer Problem Statement Template:

A well-defined customer problem statement helps us understand the real challenges faced by entrepreneurs, investors, and startup ecosystem stakeholders. It allows us to empathize with customers and design an effective startup success prediction solution.

I am a Data Data Scientist	Identify key role and roleave and background	Working on a startup financial transaction model
I'm trying to	List primary projecy project goal	Build a robuste, adaptive success prediction model system.
but	Describe what problems or barrriers stand achiet in way	Models have varying accuracy, and startup data is complex and evolving.
because	Describe omroot cue' a underynges reasons	Market conditions change, change, data fata features require careful selection, and model retarining is needed.
which makes me feel	Explain the root cause'] why problem barrier exist neds ou solved?	Challenged yet motivated to develop a sarea reliable tool for greater decision-making.

Example:

Example:

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	I am a startup founder	I'm trying to understand whether my startup idea has high chances of success	But I don't have enough data-driven insights	Because predicting business success is complex and depends on funding, milestones, and relationships	Which makes me feel uncertain and confused about future decisions
PS-2	I am an investor / venture capitalist	I'm trying to invest in promising startups	But it is difficult to identify which startup will succeed	Because startup performance depends on multiple risk factors and past funding patterns	Which makes me feel cautious and worried about losing investment
PS-3	I am a business analyst	I'm trying to analyze startup growth patterns	But manual analysis of funding and milestone data takes too much time	Because there are many variables influencing startup success	Which makes me feel stressed and inefficient
PS-4	I am an incubator / accelerator program manager	I'm trying to select startups with high growth potential	But I cannot accurately predict long-term sustainability	Because traditional evaluation methods lack intelligent prediction systems	Which makes me feel uncertain about selection decisions
