Project Design Phase
Problem – Solution Fit Template

Date	15 February 2025
Team ID	LTVIP2026TMIDS80982
Project Name	Prosperity Prognosticator: Machine Learning for Startup Success Prediction
Maximum Marks	2 Marks

Problem – Solution Fit Template:

The Problem–Solution Fit ensures that the identified problem of online payment fraud is clearly understood and that the proposed Machine Learning based fraud detection system effectively solves this issue. The solution is designed to detect fraudulent transactions in real-time, reduce financial loss, and increase customer trust in digital payment systems.

Purpose:

❑ Solve the uncertainty problem faced by startup founders and investors by providing data-driven success predictions.

❑ Reduce investment and business risk by integrating Machine Learning-based evaluation into startup decision-making processes.

❑ Improve strategic planning by offering predictive insights based on funding rounds, total funding amount, milestones, and relationships.

❑ Support entrepreneurs in making informed business decisions before expanding operations or seeking additional funding.

❑ Assist investors and venture capitalists in identifying high-potential startups using intelligent classification models.

❑ Analyze current startup evaluation challenges and enhance traditional assessment methods using Machine Learning techniques for better prediction accuracy and efficiency.
