Functional & Performance Testing Template

Model Performance Test

Date	21 February 2025
Team ID	LTVIP2026TMIDS80982
Project Name	Prosperity Prognosticator: Machine Learning for Startup Success Prediction
Maximum Marks	

Test Scenarios & Results

(Project: Startup Success Prediction using Machine Learning)

Test Case ID	Scenario (What to test)	Test Steps (How to test)	Expected Result	Actual Result	Pass/Fail
FT-01	Text Input Validation (e.g., Startup Name, Industry)	Enter valid and invalid text in input fields	Valid inputs accepted, error message shown for invalid or empty inputs	System validates correctly and displays error for invalid inputs	Pass
FT-02	Number Input Validation (e.g., Funding Amount, Funding Rounds, Milestones)	Enter numbers within and outside valid range	Accepts valid values, shows error for negative or out-of-range values	System restricts invalid numbers and shows validation message	Pass
FT-03	Prediction Generation	Provide complete startup details and click "Predict"	Startup outcome (Acquired / Closed) with probability score is displayed	Prediction result displayed correctly with probability	Pass
FT-04	Model Integration Check	Check if trained ML model loads correctly and returns prediction	Model responds successfully with correct output format	Model loaded successfully and returned prediction	Pass
PT-01	Response Time Test	Measure prediction response time using timer	Prediction should be generated under 3 seconds	Average response time: 1.8 seconds	Pass

Test Case ID	Scenario (What to test)	Test Steps (How to test)	Expected Result	Actual Result	Pass/Fail
PT-02	Concurrent Request Test	Send multiple prediction requests at the same time	System should handle multiple users without crash	System handled concurrent requests smoothly	Pass
PT-03	Database Load Test	Submit multiple startup entries and check database storage	Data should be stored correctly without failure	All records stored successfully in database	Pass
